

Dr Oliver Mathematics
Mathematics Standard Grade: Credit Level
2009 Paper 2: Calculator
1 hour 20 minutes

The total number of marks available is 52.

You must write down all the stages in your working.

1. One atom of gold weighs 3.27×10^{-22} grams. (3)
How many atoms will there be in one kilogram of gold?
Give your answer **in scientific notation correct to 2 significant figures.**
2. Lemonade is to be poured from a 2 litre bottle into glasses. (4)
Each glass is in the shape of a cylinder of radius 3 centimetres and height 8 centimetres.

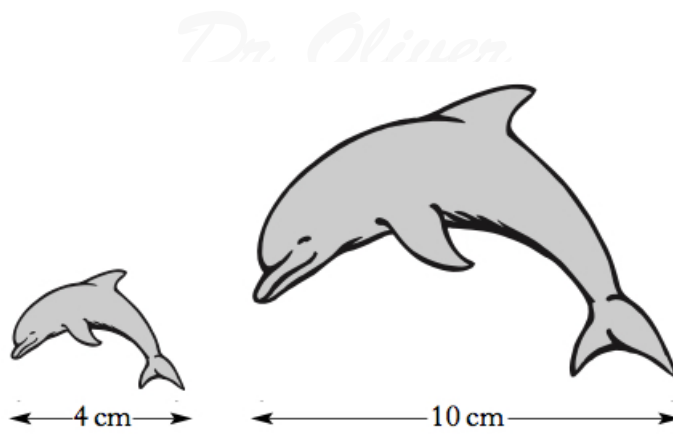

How many full glasses can be poured from the bottle?

3. Solve the quadratic equation (4)
$$x^2 - 4x - 6 = 0.$$

Give your answers **correct to 1 decimal place.**

4. Two fridge magnets are mathematically similar. (3)
One magnet is 4 centimetres long and the other is 10 centimetres long.

The area of the smaller magnet is 18 square centimetres.
Calculate the area of the larger magnet.

5. Tom looked at the cost of 10 different flights to New York. (2)
He calculated that the mean cost was £360 and the standard deviation was £74.
A tax of £12 is then added to each flight
Write down the new mean and standard deviation.
6. Teams in a quiz answer questions on film and sport.
This scatter graph shows the scores of some of the teams.

A line of best fit is drawn as shown above.

- (a) Find the equation of this straight line. (4)
- (b) Use this equation to estimate the sport score for a team with a film score of 20. (2)
7. The air temperature, t° Celsius, varies inversely as the square of the distance, d metres, from a furnace.

- (a) Write down a formula connecting t and d . (2)

At a distance of 2 metres from the furnace, the air temperature is 50°C .

- (b) Calculate the air temperature at a distance of 5 metres from the furnace. (3)
8. A company makes large bags of crisps which contain 90 grams of fat. (4)
The company aims to reduce the fat content of the crisps by 50%.
They decide to reduce the fat content by 20% each year.
Will they have achieved their aim by the end of the 3rd year?
Justify your answer.
9. Jane is taking part in an orienteering competition.

She should have run 160 metres from A to B on a bearing of 032° .
However, she actually ran 160 metres from A to C on a bearing of 052° .

- (a) Write down the size of angle BAC . (1)
(b) Calculate the length of BC . (3)
(c) What is the bearing from C to B ? (2)
10. The weight, W kilograms, of a giraffe is related to its age, M months, by the formula (4)

$$W = \frac{1}{4}(M^2 - 4M + 272).$$

At what age will a giraffe weigh 83 kilograms?

11. A cone is formed from a paper circle with a sector removed as shown.

The radius of the paper circle is 30 cm.

Angle AOB is 100° .

- (a) Calculate the area of paper used to make the cone. (3)
- (b) Calculate the circumference of the base of the cone. (3)

12. The n th term, T_n of the sequence 1, 3, 6, 10, ... is given by the formula

$$T_n = \frac{1}{2}n(n + 1), n \geq 1.$$

For example,

1st term : $T_1 = \frac{1}{2} \times 1 \times (1 + 1) = 1,$

2nd term : $T_2 = \frac{1}{2} \times 2 \times (2 + 1) = 3,$

3rd term : $T_3 = \frac{1}{2} \times 3 \times (3 + 1) = 6.$

- (a) Calculate the 20th term, T_{20} . (1)
- (b) Show that (2)

$$T_{n+1} = \frac{1}{2}(n^2 + 3n + 2).$$

- (c) Show that $T_n + T_{n+1}$ is a square number. (2)
